Search instead for chromium legacy mac os command line download

✦ AI Overview

Chromium Legacy, which supports older macOS versions (10.7–10.14), **can be downloaded and installed via the command line on Intel Macs**. The project is maintained to allow modern web browsing on obsolete hardware. GitHub +2

Direct Download & Installation via Terminal

You can use `curl` to download the latest release from the official GitHub repository and move it to your Applications folder.

Run these commands in your Terminal:

```
bash
```

```
# 1. Download the latest release
curl -L -o ~/Downloads/chromium-legacy.zip https://github.com

# 2. Unzip the file
unzip -o ~/Downloads/chromium-legacy.zip -d ~/Downloads/

# 3. Move to Applications Folder
mv ~/Downloads/Chromium.app /Applications/

# 4. Clean up the zip file
rm ~/Downloads/chromium-legacy.zip
```

Alternative: Using Homebrew (If Installed)

If you have Homebrew installed on your older Mac, you can install Chromium Legacy using the following command: DEV Community +1

```
bash
```

Key Compatibility Notes

- **macOS Versions:** Supported on Mac OS X 10.7 (Lion) through macOS 10.14 (Mojave).
- **Certificate Issues:** Older macOS versions may lack up-to-date security certificates. You may need to run a browser updater or trust certificates manually if secure websites refuse to load.
- **Warning Message:** If you get a "damaged" application error, run this command to remove the quarantine attribute:

```
bash
```

```
xattr -rc /Applications/Chromium.app
```
